

## **Disable Safe Mode**

1. Go to Start> Run
2. Type regedit and click OK
3. Navigate to  
  
HKEY\_LOCAL\_MACHINE\System\CurrentControlSet\Control\SafeBoot
4. Expand SafeBoot by clicking the + sign and you should see 2 keys with the name Minimal and Network.
5. Before you can rename the keys you must give yourself permissions to the keys. Remove inherited right and apply rights to child objects. You may also want to take ownership of the key.
6. Rename both of the keys to something else, example, Minimal to MinimalX and Network to NetworkX.?
